Dear Hiring Manager,

I just recently graduated from Gonzaga University with a BS in Computer Science. I am looking for a full time job as an entry level software developer or as an Intern where I can grow within your company and grow as a programmer.

My attached resume gives evidence of the relevant coursework and languages needed to excel at this position. My coursework has given me a rich mixture of both the theoretical and practical sides of my field. For example, the Design and Analysis of Algorithms, Object Oriented Programming, and Data Structures classes have all grounded me in the fundamentals of programming at a high level. Some of the upper division classes I decided to take were Cryptography, Computer Graphics, and Computational Modeling. These classes allowed me to practice the practical sides of coding such as building animations in C++, designing real world scientific models in Java, or encrypting messages over the internet in Python.

I also have past experience working with the Gonzaga University English Learning Center. I implemented a dynamically growing classroom where teachers could post assignments on the web app. Students in turn could access those assignments and submit their responses. Some of the technologies I used to create this app were JavaScript, JQuery, CSS, HTML, Ajax, SQL, Microsoft Azure, and Node.JS. I also have extracurricular experience where I went through a 24 week coding boot camp at University of California Irvine to become a Full Stack Web Developer.

Please feel free to contact me at the phone number and e-mail address listed on my resume. Thank you for your time and interest. I look forward to hearing from you soon.

Sincerely,

Brian Ramaswami
